AS Ultra Shutter

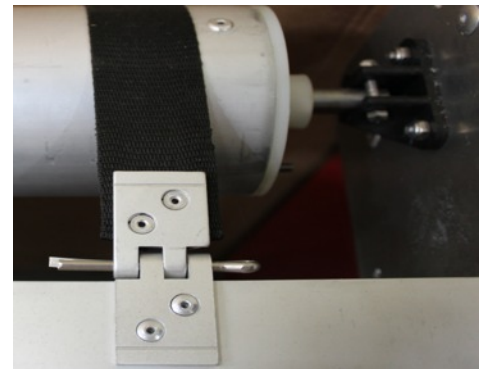

Our newly designed Ultra shutter has taken the strengths and best features from our Century 2000 design by simplifying the product along with the installation. We now offer a better value product with reduced installation costs to meet the demands of end users and OEM's alike.

Our aim is to provide a shutter which can last the life of the vehicle with as little attention required as possible.

The Ultra shutter is fitted with our flexible hinged curtain which unlike other mechanically hinged shutters will not seize up when salt incusted; nor will the ingress of road dirt or frozen water stop the articulated operation of the shutter.

We use our standard extrusions for the Ultra curtain and guide channels. The Ultra comes with a flat style bar latch, new style flag plates designed to simplify installation for the OEM; with less parts to reduce costs.

The installation is made simple with aluminium extruded guide channels with our new design preformed flag plates to allow the accurate alignment of the storage roller.

We can supply shutters with a simple anodised finish or powder coat to any customer's specific requirements. The bar latch can also be powder coated to any colour required.

The Ultra shutter should only require periodic cleaning and minor maintenance; it should require very little, if any, replacement parts. Although we recognise that physical damage can often occur due to collisions etc. and with this in mind the repair of the shutters is equally straight forward.

We support all our products through our after sales service and full individual shutter traceability allows 'immediate response' to repairs that may be needed to ensure vehicle down time is kept to a minimum.
