

Style 40A and Style 42A manhole covers

Suitable for use on non-pressure tanks and silos with a maximum working pressure of 0.35 bar (5 psi). Available in a range of sizes and specifications. Alternative versions of these manhole covers can be supplied with an integral 10" diameter pressure relief valve (see data on Style 40VM and Style 42VM manhole covers and Style 40VMP and Style 42VMP manhole covers).

Style 40A

The Style 40A manhole cover has a 10" diameter quick release hinged lid for filling or visual inspection. The baseplate can also be removed by releasing the clamp band to provide a larger aperture for inspection and is therefore not designed for frequent access.

The neckring is designed for welding into the tank shell, thus eliminating the need for adaptor flanges, etc.

Available in mild steel with 16" or 24" diameter baseplate.

A lock can be fitted if required.

Style 42A

The Style 42A manhole cover has a 10" diameter quick release hinged opening for filling or visual inspection. The neckring is designed for welding into the tank shell, thus eliminating the need for adaptor flanges, etc.

Available in mild or stainless steel.

A lock can be fitted if required.
