

### Style 46A Manhole Cover

Suitable for use on non-pressure tanks and silos with a maximum working pressure of 0.35 bar (5 psi).

#### Style 46A

The Style 46A manhole cover has a hinged lid on an 18" inside diameter neckring, which is designed for welding directly into the tank shell, eliminating the need for adaptor flanges.

Manufactured in mild steel (zinc electro-plated, except for the neckring) with a nitrile bonded cork gasket, this manlid is available with or without a deep neckring.

The swingbolt is supplied with a hole at the end of the thread in order that a seal may be fitted if required.
