

COLLINS YOULDON CATHERINE REELS

The Collins Youldon series of catherine reels for fuel oil delivery is extensively fitted to road tankers throughout the UK and is highly reliable and proven in service.

The Standard model is our most popular version with a larger hose capacity and the Slimline has been developed with larger spoked heads and a narrower drum for more restricted spaces. The drip tray can be supplied in two lengths to suit different vehicle widths.

Both reels are offered with 12V and 24V dc electric rewind and electromagnetic clutch or hydraulic rewind with direct drive. We can also fit 316 stainless steel fluid paths for AdBlue or more corrosive applications plus vacuum inlets for product uplift as well as delivery.

For hose capacities and dimensions, see table below:
